

OVER 350 EXHIBITORS, 6 THEMES AND NUMEROUS SIDE EVENTS

This year, the 23rd edition of the Precision Fair, on 13 and 14 November in the Brabant-hallen in Den Bosch (NL), counts a record number of over 350 exhibitors and numerous side events, featuring the lecture programme (including Big Science and a 40 years ASML retrospect), young talent pitches, DSPE-hosted ceremonies for the Rien Koster Award and the Wim van der Hoek Award, and a meet & match event. The 2024 edition has six central themes: Mechatronic Engineering & Systems, Metrology, Vacuum & Clean, Micro Processing & Motion, Laser & Photonics, and Production for High Precision.

Developing high-tech systems requires complex technological solutions in which measuring, producing and constructing with ever smaller and more precise tolerances is essential. The complexity is such that these solutions can only be achieved through collaboration. Not only with other (technical) disciplines, but also with many other specialised companies, education and science. That is what the 23rd edition of the Precision Fair is all about: pushing boundaries through international collaboration.

EDITORIAL NOTE

This article is based on information from Mikrocentrum, the long-time organiser of the Precision Fair and an independent knowledge and network organisation that has been supporting the technical manufacturing industry for over 50 years with training, events and business.

www.mikrocentrum.nl

International Precision Conference

This is underlined by the premiere of the International Precision Conference on the day before the fair, Tuesday 12 November, devoted to collaboration as the general way of working within the Dutch precision engineering ecosystem and supply chain. Speakers at this conference include Martin van den Brink (former CTO and co-president of ASML), Olivier Rainaut (director R&D TEM Solutions at Thermo Fisher Scientific), Helen Kardan (director of Science and Technology at TNO High Tech Industry) and Ton Peijnenburg (CTO and deputy general manager at VDL ETG).

Precision engineering value chain

With over 350 exhibitors, the Precision Fair 2024 once again shows significant growth compared to the previous year. At this meeting place for the entire precision engineering value chain, visitors will discover high- and ultra-precision technology solutions based on the following themes: Mechatronic Engineering & Systems, Metrology, Vacuum & Clean, Micro Processing & Motion, Laser & Photonics, and Production for High Precision.

Networking

During the Precision Fair, visitors can meet representatives from industry, manufacturers, educational institutions, government agencies, technical universities, and science and incubator programmes. In the central Network Arena, the following parties can be found: Einstein Telescope, Big Science, euspen, VDMA, Sirris, NEN, EPIC Photonics, Digital Industry Boost (a partnership between Fontys, Summa College, Brainport Development and Mikrocentrum), DSPE, RVO, TU Delft, TU/e, FPT-Vimag, Project MARCH, AeroDelft, and Superbike Twente.
